MIDSOUTH STATES  
 VERSION 2

COMPATIBLE WITH

## **UNDERSTANDING THE HUMMINBIRD LAKEMASTER LAKE LIST**

### **Lake Name, County**

Large reservoirs transcribe multiple counties which are cumbersome to list, so we usually identify only one for brevity's sake. Lakemaster will list the main county the Lake falls in or occasionally write "All, counties" to illustrate complete coverage. Unless Lakemaster has the Lake stated as "Partial HD", the entire lake will be mapped, regardless of the county displayed. We don't do partial maps, but if we did it would be identified as such.

### **High Definition vs Standard Definition**

High definition is ascribed to a chart by LakeMaster when the underlying data is of such high quality and density that the resulting map is very accurate. Only the most accurate and detailed surveyed data combined with the talents of our experienced GIS analysts earn the "high definition" label. Our high definition lake charts have the highest level of accuracy, especially in the shallow "fishing structure" areas. In some cases, the bathymetric data to build the map has been gathered by LakeMaster's own survey team. We then identify that as "LakeMaster high definition" chart with an asterisk. \*

### **Contour Line Density**

Spacing of contour lines does not determine if a map is high definition or not. LakeMaster uses 1-ft contours on most of our high definition maps, but not all. On some lakes that are deep and have steep break lines we use may use 3-ft contour spacing, because the lines become so dense that it isn't functional. It's still high definition i.e. "high accuracy".
