Lake Name, County

Large reservoirs transcribe multiple counties which are cumbersome to list, so we usually identify only one for brevity's sake. We will list the main county the Lake falls in or occasionally write "All, counties" to illustrate complete coverage. Unless LakeMaster® has the Lake stated as "Partial HD", the entire lake will be mapped, regardless of the county displayed. We don't do partial maps, but if we did it would be identified as such.

High Definition vs Standard Definition

High Definition is ascribed to a chart by LakeMaster when the underlying data is of such high quality and density that the resulting map is very accurate.

Only the most accurate and detailed surveyed data combined with the talents of our experienced GIS analysts earn the "High Definition" label. Our High Definition lake charts have the highest level of accuracy, especially in the shallow "fishing structure" areas. In some cases, the bathymetric data to build the map has been gathered by LakeMaster's own survey team.

Contour Line Density

Spacing of contour lines does not determine if a map is High Definition or not. LakeMaster uses 1-ft contours on most of our High Definition maps, but not all. On some lakes that are deep and have steep break lines we use may use 3-ft contour spacing, because the lines become so dense that it isn't functional. It's still High Definition, i.e. "high accuracy."

Nom du lac, Comté

Les grands réservoirs transcrivent plusieurs comtés qui sont fastidieux à énumérer, donc nous n'en identifions qu'un seul aux fins de concision. Nous dresserons la liste du comté principal du lac ou écrirons occasionnellement « Tous, comtés » pour illustrer la couverture complète. À moins que LakeMaster® n'indique que le lac est « Partial HD », le lac entier sera cartographié, peu importe le comté affiché. Nous ne faisons pas de cartes partielles, mais si nous l'avons fait, ce sera identifié comme tel.

Haute Définition c. à Définition Standard

La haute définition est attribuée à un tableau par LakeMaster lorsque les données sous-jacentes sont de qualité et de densité suffisamment élevées pour que la carte soit très exacte. Seules les données étudiées les plus précises et les plus détaillées combinées aux talents de nos analystes GIS expérimentés obtiennent l'étiquette « Haute définition ». Le niveau de précision de nos tableaux de lac haute définition est le plus élevé, surtout dans les zones peu profondes de « structure de pêche ». Dans certains cas, les données bathymétriques pour construire la carte ont été recueillies par la propre équipe de surveillance de LakeMaster.

Densité de Ligne de Contour

L'espacement des lignes de contour ne détermine pas si une carte est en haute définition ou non. LakeMaster utilise des contours de 30 cm (1 pi) sur la plupart des cartes haute définition, mais pas sur toutes. Sur certains lacs qui sont profonds et qui ont des lignes de rupture abruptes, nous pouvons utiliser un espacement de contour de 90 cm (3 pi), car les lignes deviennent tellement denses que ce n'est plus fonctionnel. C'est toujours une haute définition, c.-à-d. une « haute précision ».
